Website and contract

Smart contract

- 3 tiers
- Whitelist
- Presale
- Payment Splitter
- ERC 721 standard functions: safeTransfer, Transfer, ownerOf + others (most of them are used by OpenSea and Metamask + needed for other future integrations)
- Testing on testnets

Website “front office”

- Design
- Interface functionality design (for mint)
- Web3 connections
- Minting sections for each tier with all the functionalities: live minting total supply
- Other functionality

Website “back office”

- smart contract for the back office

Fiverr name: vladcondurat

- Deposit system
- Web3 implementations
- Redeem and withdraw system
- Other functionality

MLM system

- web3 + web2 implementations
- Each “MLM” will be able to withdraw their share from the smart contract
- All the functionality (mostly web2)
- Documentation step by step on how to take the shares from the contract(as I said in the meeting , from the contract itself)

Metamask

- automatically connect system
- The login persists even when the user refreshes or closes the webpage
- website connections

This is a resume of the whole project to cover all the checkpoints for the project. Mostly it was discussed on Discord and we could schedule further calls if there are any additional points that need explanation.

..... Total: 2000\$
